My academic and professional journey has been rooted in a deep commitment to advancing knowledge in computer science and its practical applications. I am currently a **Lecturer II** in the Department of Computer Science at Baze University, Abuja, where I have cultivated a robust teaching and research profile. My academic career has allowed me to contribute to the development of future technology professionals while pushing the boundaries of innovation in areas such as **artificial intelligence, machine learning, cybersecurity, and data science**.

Academic Background

I hold a **Master of Science in Cybersecurity, Threat Intelligence, and Forensics** from the University of Salford, United Kingdom, where I completed a thesis titled "A Machine Learning Approach to the Evaluation of Banking Trojans," under the supervision of Dr. Andrew Young. This research ignited my passion for machine learning in cybersecurity, a field I continue to explore. Prior to this, I earned my **Bachelor of Science in Computer Science (Information Technology)** from Baze University, Abuja, where I graduated with academic honors. I earned a **PhD in Computer Science** at Nile University, Abuja, with a focus on developing a **deep learning approach for joint regression and classification of facial age using convolutional neural networks**. Under the supervision of Prof .Steve Adesina.

Research Interests

My research interests span several key areas of computer science:

- **Artificial Intelligence & Machine Learning:** I am particularly focused on enhancing the performance and interpretability of neural networks and developing applications in natural language processing, computer vision, and autonomous systems.
- **Data Science & Big Data Analytics:** My work involves predictive analytics, real-time data analysis, and mining techniques to process large-scale datasets.
- **Cybersecurity:** I research advanced cryptographic techniques and intrusion detection systems, aiming to bolster defenses against sophisticated cyber threats such as APTs (Advanced Persistent Threats).
- **Human-Computer Interaction (HCI):** I am interested in creating user-centric interfaces, including augmented and virtual reality applications, that improve user experiences.
- **Educational Technology:** I explore how e-learning platforms and gamification can enhance educational outcomes through personalized learning experiences.

Teaching Experience

As a lecturer, I have been privileged to teach a variety of computer science subjects, from **Artificial Intelligence and Machine Learning** to **Cybersecurity** and **Software Engineering**. I strive to make my teaching engaging by connecting theoretical concepts with practical applications. My courses often include hands-on projects and labs, where students tackle real-world challenges. For instance, in **Digital Forensics and Investigations**, students use tools like Cisco Packet Tracer and Wireshark to simulate and analyze network security scenarios.

My teaching also extends to **Database Systems**, where I guide students through SQL/NoSQL databases, data modeling, and distributed systems. I have designed and facilitated workshops on **algorithms**, **data structures**, and **programming languages**, ensuring that students develop a strong foundational knowledge alongside their technical skills. I am a strong advocate for modern software development practices, and I regularly teach agile methodologies, DevOps, and software quality assurance as part of my software engineering courses.

Professional Experience

Before becoming a Lecturer II, I served as an **Assistant Lecturer** at Baze University from 2019 to 2022. My role involved teaching core computer science courses, supervising practical sessions, and mentoring students. I have also participated in curriculum development and administrative activities, including serving as a **Level Coordinator**, where I manage the academic and operational functions of a specific level within the department.

Publications & Contributions

My research contributions have been recognized through numerous publications, with topics ranging from **machine learning for Android malware detection** to **path loss prediction using neural networks**. Notably, my work on **proactive network forensics for Denial-of-Service attacks** and **age estimation using convolutional neural networks** has been well received by the academic community. I have presented my findings at international conferences, and my research has been published in respected journals.

I am also passionate about using technology for social good, as evidenced by my recent development of **Visioface**, an Android app that uses deep learning for facial recognition to aid the visually impaired. This project showcases my commitment to developing inclusive and accessible technologies. Find the link to my researches on ResearchGate and google scholar below.

Awards & Recognition

Throughout my career, I have been fortunate to receive several commendations and awards. These include recognition from the **Vice Chancellor of Baze University** for my contributions to the national policy development for the **National Biosafety Management Agency (NBMA)** and my

work in the **ITIR Hackathon**. I have also been acknowledged by the **Vice Chancellor of Salford University** for academic excellence during my time there.

Professional Memberships

I am an active member of the **International Association of Engineers (IAENG)**, where I collaborate with peers to stay updated on the latest advancements in engineering and technology.

Looking Forward

As I continue my academic and professional journey, my focus remains on advancing the field of computer science through innovative research and impactful teaching. I am particularly excited about the potential applications of **AI, cybersecurity, and data analytics** in solving real-world problems and look forward to contributing to both academia and industry.
